學號:R05546022 系級: 工工所 碩二 姓名:涼宮春日

1.請比較你實作的 generative model、logistic regression 的準確率,何者較佳? 答:

Generative: 0.84475

Logistic: 0.848595

2.請說明你實作的 best model,其訓練方式和準確率為何?

答:

XGBoost ensemble gradient descent boosting with each tree maximum split = 6

Accruacy: 0.87776

3.請實作輸入特徵標準化(feature normalization),並討論其對於你的模型準確率的影響。

答:

Logistic regression: 0.85043, Accruacy increase

Generative: 0.84511, Accruacy increase

4. 請實作 logistic regression 的正規化(regularization),並討論其對於你的模型準確率的影響。

答:

Logistic regression: 0.85043 · Accruacy increase

5.請討論你認為哪個 attribute 對結果影響最大?

fnlwgt  $\cdot$  By using the Importance function in XGBoost, it indicates the feature in which used most frequently during node split.
